Schedule confirmed on inquiry

6 modules

A structured curriculum covering crypto markets, order types, technical analysis, leverage risk, execution planning, and trading discipline.

Published price information

Pricing confirmed on inquiry

The supplied pricing brief does not assign a confirmed standalone fee to this course.

Who this is for

For learners who want a structured introduction to crypto-market analysis, execution planning, and risk control.

Before you begin: Any prerequisites and recommended prior knowledge will be confirmed before enrollment

Main areas of study

01. Crypto-market fundamentals: cryptocurrency, blockchain, coins, tokens, spot, futures, and market structure
02. Platforms and order types: exchanges, market, limit and stop orders, leverage, margin, funding, and liquidation
03. Technical analysis: candlesticks, support and resistance, trends, breakouts, breakdowns, and volume
04. Indicators and confluence: moving averages, RSI, MACD, volume, multiple timeframes, and combined setups
05. Risk management: position sizing, stop-losses, take-profit planning, leverage risk, and drawdown management
06. Trading psychology and execution: planning, entry and exit rules, discipline, journals, and common mistakes

Learning objective

Use a structured framework for crypto analysis, risk management, and hypothetical trade planning without relying on trading calls.

Format: Format confirmed on inquiry

Before enrollment

Ask for the assigned instructor profile, complete module schedule, assessment details, final fee, and cancellation terms in writing. The next start date is to be confirmed. An inquiry does not reserve a place.
